

JobQuest

An AI-Native Experiential Career-Exploration Platform

“Try the job before you pick the career.”

THE PROBLEM

Career decisions are made almost blind.

Blind decisions

Most people choose a career knowing almost nothing about the day-to-day work.

Quizzes, not evidence

MBTI, RIASEC ask what you think you'd like.

39–76%

get a different MBTI type on retake

Vietnam's gap

Shows up as major-career mismatch and a real skills gap for employers.

Every tool owns one piece — none owns all four.

Forage

Real tasks — static, recruitment-bound

Orientation quizzes

Discovery — never lets you do the job

Life-sim games

Engaging — entertainment, not guidance

AI research demos

Early-stage, reflection-focused

No system unifies honest job simulation + discovery + a game layer + AI-native generation — **and that intersection is JobQuest.**

HOW IT WORKS.

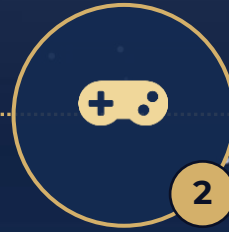

You experience the job — as a playable, AI-driven simulation.

1

Pick a job

Browse an open library, or let a guided journey suggest paths.

2

Play the tasks

A short, story-driven simulation of what the role really does.

3

See if it fits

Get your result plus the job's honest profile from other players.

AI IS THE CORE ENGINE

Generates each scenario from a curated seed per role

Narrates & adapts the story to your choices

Judges your responses

THE LOGO

One guiding star for the career you choose.

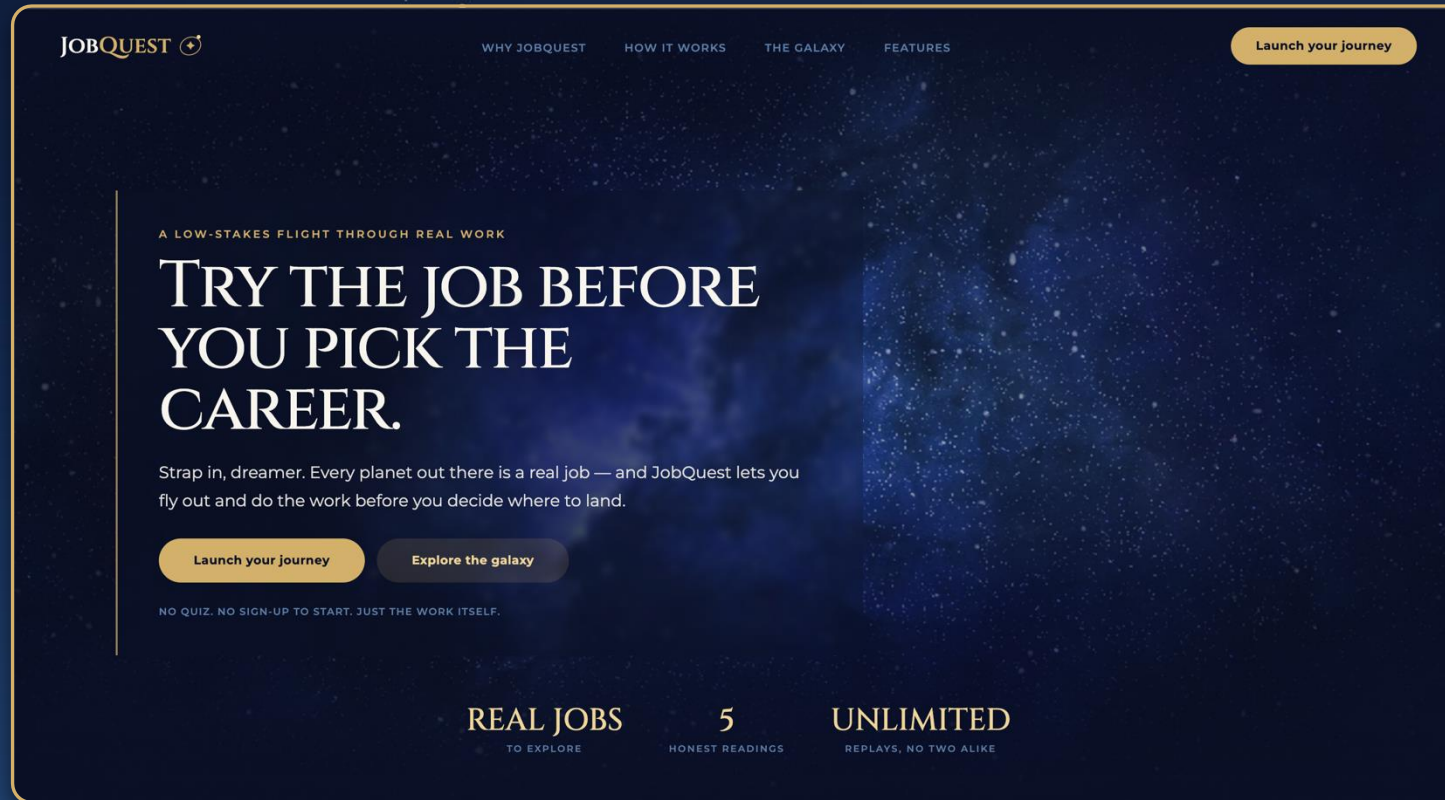

A single star marking the moment a path stops being a guess.

- ★ **The four-pointed star** part compass, part spark: a clear direction and the thrill of trying something new.
- ★ **Held in a circle** one focused world you step into and actually explore, start to finish.
- ★ **Gold on midnight** aspirational and a little premium — but still playful, like a game you want to open.

THE PRODUCT

Version 1 landing page.

The idea in one screen

“Try the job before you pick the career” — a real job waiting behind every launch.

Honest by design

“5 honest readings,” “no quiz, no sign-up to start” — the real trade-offs, rated by players.

One clear way in

“Launch your journey” drops you straight into the work.

SCOPE & SIGNIFICANCE

Phase 1: go deep on IT — and prove it works.

SCOPE & EVALUATION

- ★ **Go deep on IT first** the roles we know best. Other fields are future work.
- ★ **Prove it offline** benchmark the AI's scenario generation and judging accuracy against an expert-reviewed IT reference set.

WHY IT MATTERS

- ★ **Better fit, less regret** honest, experiential previews for everyone.
- ★ **Real self-efficacy** confidence from doing the job — something a quiz can't give.
- ★ **Beyond the test** a real alternative for Vietnam's major-career mismatch.
- ★ **Technical contribution** validated AI scenario generation + a benchmarked LLM-as-judge.

“Life is more than work.”
